

## GSApi Process bufferline to MultiPress order

### Description

Process a bufferline entry in MultiPress to an actual order with the print file included. After using GSApi Order Submit for MultiPress, GSApi will then create bufferline (pre-order) entry in MultiPress. GSApi will then send an XML file to Enfocus Switch containing the MultiPress bufferline\_id. GSApi Process bufferline to MultiPress order will then add the print file and process the bufferline to an order.

### Compatibility

Enfocus Switch 2019 Fall and higher (Mac/Win).

### Connections

Requires one input connection and two output connections.

### Input:

- Folder after submit point or webhook, containing the GSApi XML file

### Output:

- Success data: when the order has been created.
- Error data: when there is an error creating the MultiPress order or adding the print file.

### Flow elements properties

- GSApi environment  
Use GSApi demo or live environment
