

PDF Watermarks

Version 1.0

Description

Watermarks are essential in business. Whether you need to ensure that confidential information is kept secure or notifying key stakeholders on the current draft status of a contract they are reviewing. There are unlimited use cases in the business world for watermarks and we have created a tool that makes watermarking as part of your workflows easier than ever.

Our watermarking solution enables users to select many different properties of their watermarks including the Font Size, Color, Orientation, Location, Opacity and more.

Set the properties of the watermark, activate your flow and start watermarking.

Compatibility

Switch 2020 Spring and higher, Windows & Mac

Setup

Add the PDF Watermarks application into your flow and configure the properties.

Connections

PDF Watermarks application requires at least one incoming connection and one outgoing connection.

If the watermarking was successful, then the job will move the original document to the “Success” output connection(s).

If the watermarking was unsuccessful, then the job will move to the “Error” output connection(s).

Application Properties

- **Watermark Text**

Text to be displayed in your watermark

- **Watermark Location**

Location of the watermark i.e. bottom right

- **Watermark Rotation**

The rotation of the watermark i.e. 75 degrees

- **Font Color**

The color of the font to be used in your watermark i.e. blue, green, red

- **Pages**

Add watermark to first or all pages

- **Opacity**

The opacity of the watermark between 1-100% in increments of 10%

Example Flow
