

GKS Connect

Description

GKS Connect is an app to receive and log back data to the MIS system GKS4. New orders is fetched with a payload from a webhook that GKS is sending. New orders will be split in different job parts in Switch. Switch can then report back different status to GKS such as Preflight, Reviewlinks, Approval status and if job arrives or is present.

Compatibility

Enfocus Switch 2024 spring and higher. Metadata module is required. Mac and Windows. GKS4 or higher.

Compatibility third-party applications

GKS Connect only works with GKS4 or higher.

Read more on <https://www.simutek.se> where you find information on English, Swedish and Norwegian.

Connections

GKS Connect requires at least one incoming connection. The outgoing connect is a traffic light where you can choose between success, warning and error. This stages routes the job depending on status of the process in the app.

Properties detailed info

You can use GKS Connect in Switch for different stages in GKS. Depending on if you have a new job/order or if you wants to log back data, you have different properties to use.
