

## Check File Existence

### Description

This app verifies the existence of a specified file by checking the provided file path. Perfect for workflows that depend on certain files being available, it ensures efficient file management by identifying missing or incorrectly specified file paths before further processing.

### Compatibility

Switch 2023 Fall and later.

### Connections

The app has an incoming connection and traffic light output connections. In the event of an error, the job fails.

### Flow elements properties

- **File Path:**  
The path of the file to be checked
- **Job handling strategy:**  
In the case that the specified file is missing, the further behavior of the job can be altered by this dropdown menu:
  - If the dropdown value is set to 'Problem jobs', the job becomes an error job in the problem jobs folder and can be retried later.
  - If the dropdown value is set to 'Error connection', the job is being redirected to the red connection of the traffic light output.

### Outgoing connections properties

- No properties for outgoing connections
