Viewer

Improvements

- In the previous version of Review, an issue occurred where users were redirected to the Post-Approval page even when the Post-Approval option was not activated in the theme. This problem has been rectified, and now users will no longer be redirected if the Post-Approval option is not enabled in the theme settings.

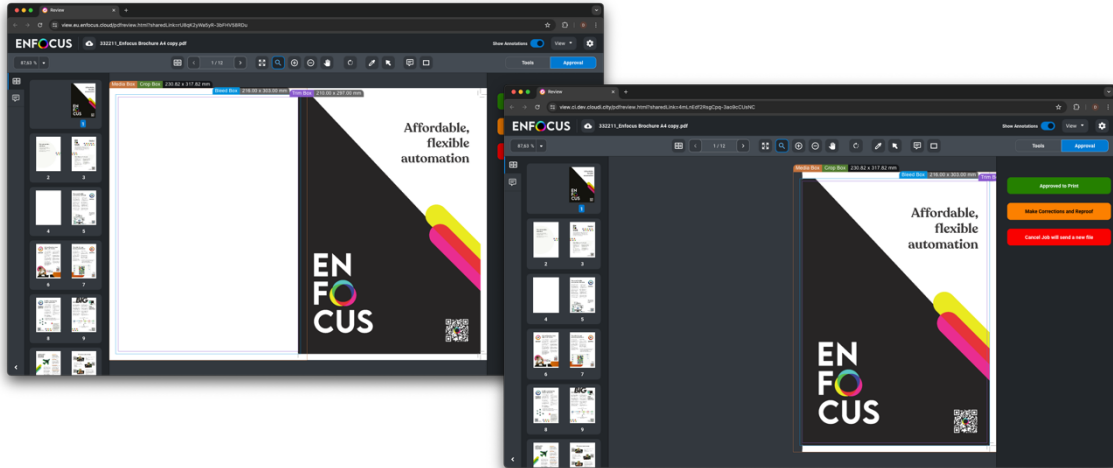

- Previously, when encountering a blank page in spread view, an unintended issue occurred where the adjacent page would also display as blank. This issue has now been rectified.

- When using the spread view alongside the cover page option, users previously encountered a visual anomaly where a blank page appeared at both the beginning and end of the cover. This issue has been addressed, ensuring that blank pages will no longer disrupt the visualization. Furthermore, the visualization of the page boxes has been improved as well, no longer showing these on the blank page instead of the cover pages.

- There were some issues in the French translations where certain strings were not visualized correctly or in another language.

Collections

Detailed approval decisions

In the collections environment, users can now access comprehensive details regarding approval decisions. They have the advantage of visualizing the precise decision that has been made, offering a clearer understanding of the process.
